

Kaak FPS Multi-Deck Proofer

The Multi-Deck Proofer from Kaak FPS is a final proofer that consists out of one or more levels, making the proofing time and capacity flexible without increasing the floor space.

The proofer is accommodated with a climate control system and insulated housing. It can be equipped with either belts, canvas or chains to accommodate your product carriers.

Your product carriers are loaded to and unloaded from the right level of the Multi-Deck Proofer by means of a lift. Multiple products with different proofing times can be placed in the proofer at the same time giving you optimal flexibility in your production.

Contact us to find out more about the Final Proofers of the Kaak Group.
